

# KEEP YOUR COMMUNITY SAFE WHEN THE GRID FAILS

Backup generators protect power, but rooftop solar can create hidden hazards.

Our long-range, wireless system instantly disconnects solar inverters when generators run, keeping your community and equipment safe

## Hidden Risks During Outages, when the main grid goes down:

- Rooftop solar can keep feeding electricity into the network
- Maintenance crews face electric shock hazards
- Generators can overload or fail
- Local grid stability is compromised

## Instant Wireless Isolation. Our radio-based solution:

- Communicates instantly with all solar inverters
- Disconnects distributed solar the moment a generator activates
- Operates independently of the grid or wired infrastructure

## Fast, Simple, and Reliable

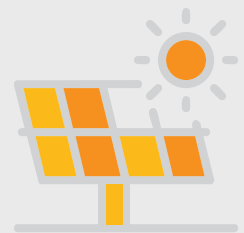

**Wireless:**  
No cables,  
no trenching

**Plug-and-play  
installation**  
in hours

**Maintenance-Free  
and highly reliable**

**Compatible:**  
Works with existing  
solar systems

**Protect, Safeguard and  
ensure reliability**

- | Protects your community and personnel
- | Prevents damage to generators
- | Backup power always works
